Inveck

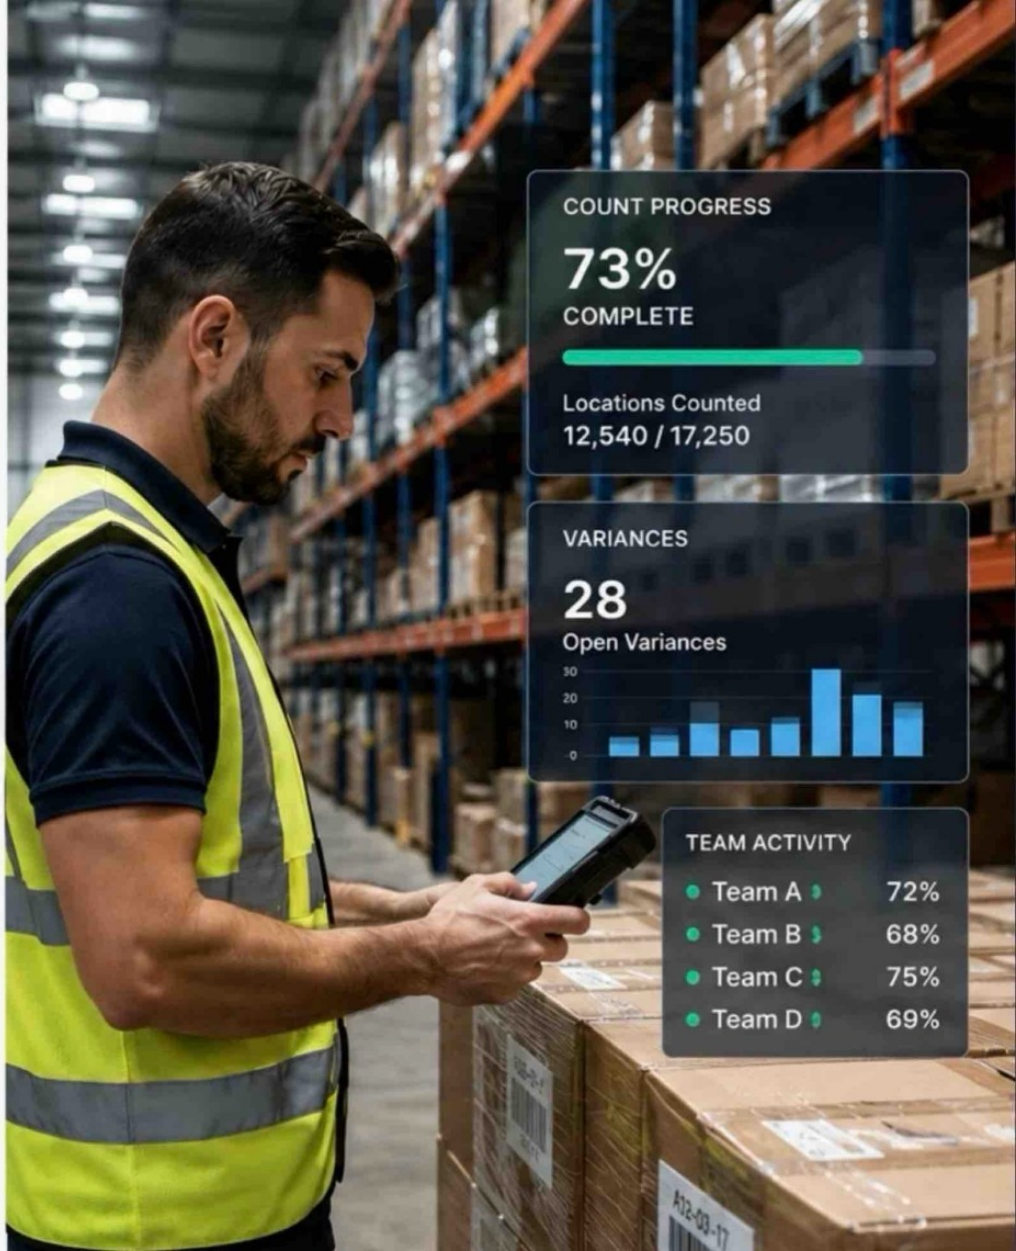

Verify Smart.

A paperless, mobile-first approach to physical inventory verification.

Smarter Inventory Counting for 3PL Operations.

Cycle Counts + Wall-to-Wall Stock Takes

Count faster. Reconcile smarter. See progress in real time.

The warehouse is operationally digital, but physical inventory verification still depends on paper, pens and spreadsheets.

01 **PRINT** count sheets › 02 **COUNT** physical stock › 03 **WRITE** qty on sheet › 04 **ENTER EXCEL** data entry › 05 **CONSOLIDATE** multiple files › 06 **RECONCILE** find variances › 07 **REPORT** finally

WHERE THE PROCESS BREAKS

PAIN · 01

Paper dependency

Every count cycle starts with reams of printouts.

PAIN · 02

Manual recording

Operators handwrite quantities that must be re-read later.

PAIN · 03

Duplicate data entry

Same numbers typed into Excel after they were already counted.

PAIN · 04

No real-time visibility

Management sees progress only after consolidation.

PAIN · 05

Error correction

Recounts triggered by hard-to-trace handwritten errors.

PAIN · 06

Delayed reconciliation

Variance report arrives days after the count is finished.

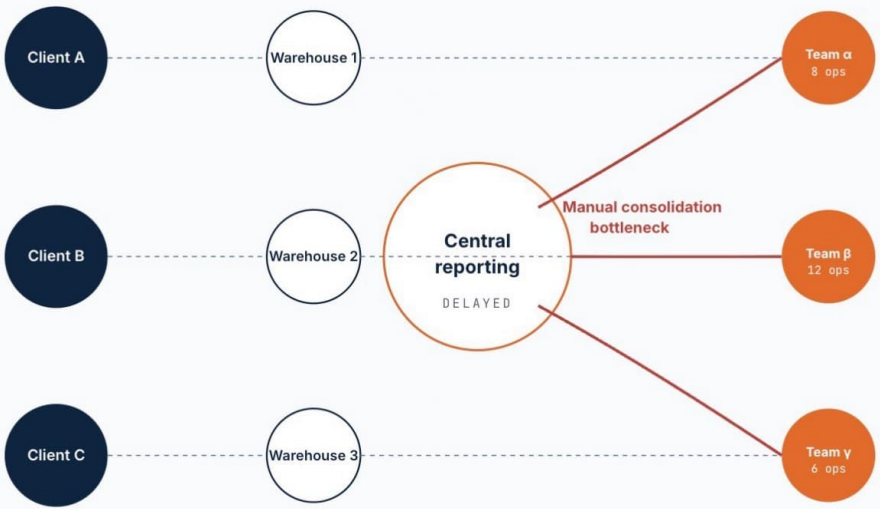

*"For a 3PL, these inefficiencies repeat across **client accounts, warehouse locations and stock-take cycles,** affecting SLA performance, client confidence and operating margin."*

For a 3PL, inventory verification is not a single problem, it is a problem at scale.

INPUTS THAT MULTIPLY THE EFFORT

- **Multiple client accounts**
  Each client carries its own SKU master and SLA.
- **Multiple warehouse sites**
  Often in different cities, languages and shifts.
- **Thousands of storage locations**
  Pallet positions, bins, racks and zones per site.
- **Multiple counting teams**
  Internal staff, contractors, seasonal support.
- **Multiple SLAs & reporting needs**
  Audit, financial close, statutory and per-client reports.

THE CHAIN THAT BREAKS

FOUR CONSEQUENCES AT SCALE

01 **Higher manpower**

02 **More reconciliation**

03 **Delayed visibility**

04 **Difficult scalability**

*The challenge is not counting inventory. It is **controlling the entire verification process.***

Two counting requirements. One digital workflow.

METHOD 01

Cycle Count

A rotating count of a defined subset of locations and SKUs.

WHAT IT IS

A rotating count of a defined subset of locations & SKUs, typically organised by category — **Fast, Slow or Non-moving** inventory.

FREQUENCY

Daily · Weekly · Monthly

PURPOSE

Ongoing accuracy monitoring and early discrepancy detection.

TEAM

Small, rotating teams.

INVECK SUPPORT · CYCLE

Automated rotating schedules with live dashboard visibility into coverage and progress.

METHOD 02

Wall-to-Wall Count

A complete physical count of every location and SKU in the facility.

WHAT IT IS

A complete physical count of **every location and SKU** in the facility.

FREQUENCY

Annual · Bi-annual

PURPOSE

Full reconciliation, audit, financial close, statutory.

TEAM

Large teams working simultaneously across zones.

INVECK SUPPORT · WALL-TO-WALL

Multiple teams count in parallel through the same app; management tracks completion and variances through one dashboard.

Whether it is a routine cycle count or a full-facility stock take, the underlying digital workflow remains the same.

Replace the paper-and-spreadsheet chain with one structured digital workflow.

BEFORE · TRADITIONAL PROCESS

01	Physical count
02	Paper sheets
03	Handwritten quantities
04	Excel / spreadsheet entry
05	Manual consolidation
06	Variance identification
07	Recount / correction
08	Final report — days later

AFTER · WITH INVECK

01	Set Up	locations · SKUs · teams
02	Count on mobile	no paper · no offline sheets
03	Digital data capture	auto-captured at source
04	Automatic variance detection	no Excel lookups
05	Second count / reconciliation	photo evidence · remarks
06	Live dashboard	real-time completion %
07	Reporting	site · region · client

FOUR STEP WORKFLOW · Set Up › Count › Reconcile › Report

One app, one source of truth, one dashboard.

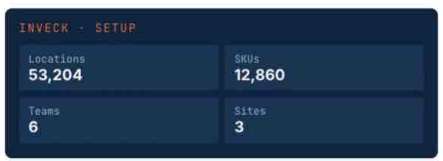

One workflow. From count to report.

STEP 01

Set Up

Load the system before the count begins.

- **Inventory / System data upload**
- **Users upload**
- **Allocation**

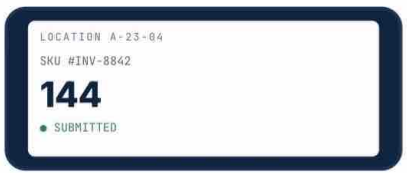

STEP 02

Count

Operators count directly through the mobile app.

- **Search item**
- **Enter quantity**
- **Other parameters** *(capture photo, remarks, etc.)*

STEP 03

Reconcile

Variances detected and resolved inside the workflow.

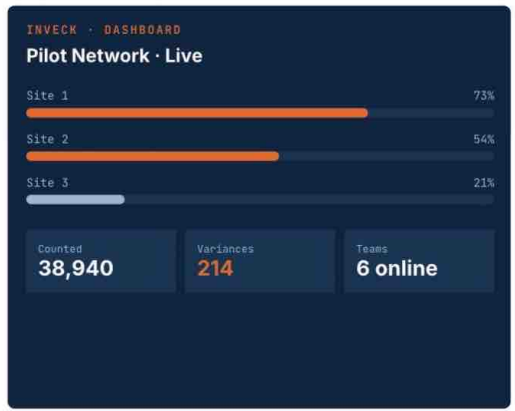

- Auto-variance detection
- Built-in second count
- Photo evidence
- Remarks attach to record

STEP 04

Report

Live visibility into progress, variances and reporting.

1 Set Up — 2 Count — 3 Reconcile — 4 Report

What changes for your 3PL? Four measurable shifts.

METRIC · 01

2X

Counting productivity per operator

Operators can count **up to 2X faster per shift** when paper and re-entry are removed.

METRIC · 02

90%

Faster data collation

Approximately **90% reduction** in time spent compiling count data.

METRIC · 03

0

Paper printouts required

A **paperless counting process** eliminates printed count sheets and stationery.

METRIC · 04

REAL-TIME

Dashboards & reconciliation

Management can track **progress, completion and variances** as they happen.

OPERATIONAL OUTCOMES

Operational efficiency
Higher counting productivity per FTE.

Lower operating cost
Reduced manpower and stationery spend.

Faster reconciliation
Variance turnaround in hours, not days.

Better visibility
Live progress for ops, audit & clients.

Measured impact. Built for 3PL scale.

PILOT DEPLOYMENT · CYCLE COUNTS AT SCALE

In a live pilot deployment across **53,000+ storage locations**, Inveck **doubled counting throughput per operator** and reduced the total manpower requirement for the counting function by **roughly half**.

LOCATIONS

53,000+

Storage locations in pilot

THROUGHPUT

2X

Counting throughput per operator

MANPOWER

50%

Reduction in manpower for counting

The pilot also **eliminated the manual data-compilation step** *— demonstrating the operational value of a digitised counting workflow at scale.*

Pilot centred on rotating cycle counts; the same digital workflow applies to wall-to-wall counting.

CLIENT VALUE DELIVERED ACROSS SIX DIMENSIONS

01
Efficiency
Higher counting productivity.

02
Accuracy
Reduces manual-entry risk.

03
Visibility
Real-time progress.

04
Cost control
Lower manpower & stationery.

05
Client trust
Transparent reporting.

06
Scalability
One process across sites.
